CLEAN WATER TECHNOLOGIES FOR IMPROVED PERFORMANCE AND ENVIRONMENTAL COMPLIANCE

**Membrane
Filtration**

Ultraviolet Disinfection

Stricter environmental protection regulations have lowered acceptable contamination levels for water and waste water. They emphasize more source reduction, recycling and further processing of waste streams. Southern California Edison's Clean Water program provides commercial, industrial and municipal customers with solutions to improve performance and meet environmental regulations. SCE can show you how to improve product quality and reduce operating costs while meeting environmental regulations.

Our engineers are knowledgeable in water treatment technologies such as reverse osmosis, nano filtration, ultra filtration, micro filtration, ozonation, and ultraviolet. We can help you evaluate, develop and implement cost-effective solutions for your water and waste water treatment needs. We'll help you sort through the jumble of regulatory and technical information — all in an effort to improve your bottom line.

Read on to learn more about SCE's Clean Water program and the specific resources available to you.

EDISON

An EDISON INTERNATIONAL Company

INNOVATIVE TECHNOLOGIES CAN REDUCE OPERATING COSTS AND IMPROVE PRODUCTIVITY

SCE can help you meet your processing objectives, maintain environmental compliance, and improve your bottom line. We offer qualified consultation regarding various water and waste water treatment processes. Through the Clean Water program, SCE can assist you with:

- Process evaluation
- Technology assessment, evaluation and recommendations
- Design and development of your water treatment process
- Technology demonstrations
- Training seminars and workshops
- Economic analysis
- Regulatory compliance

MARKETS/INDUSTRIES	
Water and Waste Water Treatment	
Electronics and Semiconductor	
Petrochemical	
Pharmaceutical	
Chemical	
Food Processing	
Manufacturing	
Metal Finishing	
Textiles	
Printing and Photographic	
Commercial and Industrial Laundries	
Hotels and Motels	

Whatever your challenge, at SCE we want to be part of the solution. We can assist you with many technologies, some of which are listed here. Feel free to call us even if you don't see a particular technology listed, we may be able to help.

NANO FILTRATION FOR

- color removal
- water softening
- heavy metal removal
- BOD reduction
- acid clarification

ULTRA FILTRATION FOR

- dye concentration
- color removal
- caustic recovery

REVERSE OSMOSIS FOR

- desalination of brackish water and sea water
- metal ion recovery
- pre- and post-treatment to ion exchange
- BOD and COD reduction

OZONATION FOR

- disinfection
- taste, odor and color removal
- reduction of THMs
- reduced bio-fouling

ULTRAVIOLET TREATMENT FOR

- waste water disinfection
- process water disinfection
- ground water treatment

MICRO FILTRATION FOR

- particulate removal
